Education

San Jose State University — San Jose, CA
Bachelor of Science in Computer Science, Minor in Digital Media Art — Aug 2021 – Dec 2025

Experience

Founder & Full-Stack Software Engineer — Jan 2026 – Present
Replova (replova.app) — San Jose, CA

- Architected and developed a full-stack reputation-management SaaS using Next.js, React, TypeScript, Supabase/PostgreSQL, and Vercel
- Integrated Google Places and Google Business Profile APIs for business discovery, OAuth authorization, review synchronization, and direct reply publishing
- Built an AI-assisted review system that generates three contextual reply drafts, analyzes sentiment, flags urgent reviews, and schedules approved responses
- Implemented Stripe subscription billing, secure magic-link authentication, plan-based feature controls, and six automated background workflows

Software Engineer Intern — May 2024 – Jul 2024
Life Stages (lifestages.us) — San Francisco, CA

- Redesigned the Daily Check-in flow in React, cutting it from 6 steps to 3 and adding client-side form validation
- Refactored duplicated UI into reusable Hooks-based React components and fixed a Safari flexbox layout bug that broke the check-in form on iOS
- Wrote unit and integration tests with Jest and React Testing Library and added coverage checks to the GitHub Actions CI/CD pipeline to catch regressions
- Shipped on a team of 6 engineers through daily standups, sprint planning, and peer PR review

Projects

Booking & Operations Platform for a Mobile Detailing Business
Next.js, TypeScript, PostgreSQL, Supabase, Tailwind CSS

- Operated the booking, pricing, and availability platform for my own mobile car detailing business, processing 26 bookings and $3,900 in revenue over 2 months
- Enforced customer, operator, and admin access boundaries with PostgreSQL Row Level Security policies on Supabase
- Hardened authentication endpoints with rate limiting, brute-force lockout, and CSP and HSTS security headers

Full-Stack Content Search Platform
React, Node.js, Express.js, ElasticSearch, PostgreSQL, Google OAuth 2.0

- Designed a full-stack MERN e-commerce application with a responsive React storefront, relevance-ranked product search, category filtering, and a persistent cart with real-time quantity and total updates
- Engineered 22 REST API endpoints for product, user, order, and contact workflows, securing access through bcrypt password hashing, JWT authentication, Google OAuth, and role-based authorization
- Developed an admin dashboard that aggregates live catalog, customer, order, revenue, payment, and fulfillment data, backed by protected CRUD operations and automated email delivery via Nodemailer

IoT Environmental Monitoring Dashboard
Next.js, React, Context API, Tailwind CSS, Material UI, Google OAuth, Sheets API, Firebase Realtime Database

- Led a 3-person frontend team within a 17-member cross-functional engineering group to deliver a responsive Next.js dashboard for an automated community-garden monitoring system
- Connected Google OAuth, Drive Picker, Sheets API, and Firebase Realtime Database, enabling users to authenticate, create or select spreadsheets, filter sensor readings by date, and export temperature and humidity data
- Structured the React frontend across 4 user-facing pages and 7 reusable components, using Context API, Tailwind CSS, and Material UI to manage shared state and build responsive, authentication-aware workflows

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, SQL, HTML/CSS
Frontend: React, Next.js, Tailwind CSS, MUI
Backend: Node.js, Express.js, REST APIs, Anthropic Claude API, Stripe, Webhooks, JWT, OAuth 2.0
Databases: PostgreSQL, Row Level Security, Supabase, ElasticSearch, Firebase Realtime Database
Infrastructure & Testing: Linux, Raspberry Pi, Vercel Serverless Functions, Docker, Jenkins, GitHub Actions, CI/CD, Jest, React Testing Library, Git
