Education

San Jose State University Aug 2021 – Dec 2025
Bachelor of Science in Computer Science, Minor in Digital Media Art *San Jose, CA*

Experience

Founder & Software Engineer Jan 2026 – Present
Replova (replova.app) *San Jose, CA*

- Built a web app that writes Google review replies for med spas and dental offices in each client's own voice. Next.js, TypeScript, PostgreSQL, and the Anthropic Claude API. Running a live pilot with one practice, 118 replies drafted so far
- Owners review and edit every draft in a React dashboard before it posts. 68% went out unchanged
- Set up Docker Compose so the app, Postgres, and migrations run the same locally and in CI. 47 Jest tests hit a real database on every push through GitHub Actions
- Moved nightly drafting and email digests onto AWS Lambda, scheduled with EventBridge and writing exports to S3. Median draft takes 2.8s. Failed runs land in a dead-letter queue and alarm through CloudWatch. All of it defined in Terraform
- Stripe handles billing. Verified webhook signatures and idempotency keys keep subscription state correct when events retry or show up out of order

Software Engineer Intern May 2024 – Jul 2024
Life Stages (lifestages.us) *San Francisco, CA*

- Redesigned the Daily Check-in flow in React. Cut it from 6 steps to 3 and added client-side validation
- Pulled duplicated UI into reusable Hooks-based components. Fixed a Safari flexbox bug that broke the check-in form on iOS
- Wrote unit and integration tests with Jest and React Testing Library, and added coverage checks to the GitHub Actions pipeline
- Worked on a team of 6 engineers with daily standups, sprint planning, and peer PR review

Projects

S.C. Detailing | Booking & Operations Platform Sep 2025 – Jan 2026
Next.js, TypeScript, PostgreSQL, Supabase, Tailwind CSS

- Ran the booking, pricing, and availability platform for my own mobile car detailing business. 26 bookings over 9 months
- Used PostgreSQL Row Level Security on Supabase to keep customer, operator, and admin data separate
- Added rate limiting, brute-force lockout, and CSP and HSTS headers to the auth endpoints

Zaiku | Full-Stack Content Search Platform Jan 2025 – Apr 2025
React, Node.js, Express.js, ElasticSearch, PostgreSQL, Google OAuth 2.0

- Built a React search UI with debounced live results. ElasticSearch custom analyzers and fuzzy matching handle typos
- Wrote an Express.js REST API with ingestion routes that index documents into ElasticSearch using custom mappings
- Added JWT sessions and Google OAuth 2.0 sign-in, with tests covering ingestion, search, and login

HydroSense | IoT Environmental Monitoring Dashboard Oct 2023 – Dec 2023
Python, Raspberry Pi, Firebase, Next.js, React, Google Sheets API v4, OAuth 2.0

- Owned the sensor pipeline on a team project. A Python service on a Raspberry Pi 4 reads an SHT31D sensor over I2C and writes timestamped readings to Firebase every 60 seconds
- Built the reporting export with Google Sheets API v4 and the Drive Picker. Client-side OAuth refresh kept long sessions writing without re-authentication
- Worked with teammates to surface readings in a Next.js and React dashboard for live and historical views

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, SQL, HTML/CSS
Frontend: React, Next.js, Tailwind CSS, MUI
Backend: Node.js, Express.js, REST APIs, Anthropic Claude API, Stripe, Webhooks, JWT, OAuth 2.0
Databases: PostgreSQL, Row Level Security, Supabase, ElasticSearch, Firebase Realtime Database
Cloud & Infrastructure: AWS (Lambda, S3, EventBridge, CloudWatch, IAM), Terraform, Docker, Docker Compose, Linux, Vercel Serverless Functions, Raspberry Pi
CI/CD & Testing: GitHub Actions, Jenkins, Jest, React Testing Library, Git
